Load Capacity	1500kg
Stacking	4 High (total load up to 6 tonnes with 1.6m posts)
Weight of M1 base	27kg
Finish	Galvanized

This heavy duty stacking post pallet is quite simply brilliant value for money. Our TITAN post pallets are made in Europe and load tested and certified.

This post pallet base can have stacking poles inserted in each corner to build the post pallets up into a tower. The height of the poles can be changed to suit your products or application. The use of post pallets can negate the need for pallet racks, especially for temporary warehouse racking or peak periods. Hoops are fitted to the underside of the post pallet for forklifts to safely pick up the unit.

The price is for the base only — posts are extra. Posts come in a selection of lengths as options. Frames are prime quality steel and galvanized for a long hard-wearing life. Each M1 base is rated to 1500kg. These have been load tested by TUV Rheinland.
